NEW WILSON DYNAPOWER CLUBFITTING

Matt Davis NZPGA Golf Professional has invested in the new Wilson Dynapower fitting kit that has been now starting to compete up with the big brands in the golfing industry. If you need to replace your putter, Wedges Irons, Hybrids, Fairway woods and Driver then you need to check out my fitting kit. I offer the Garmin R10 Launch Monitor to give you specific numbers on how the new clubs are working against your own.

Drivers:

Fairway Woods:

With the new woods, keeping the ball airborne for as long as possible is going to give you more distance. Both Driver and Fairway woods offer increased front to back and heel to toe length that provides a high MOI and lower centre of gravity than helps you achieve this.

Hybrids:**Irons:**

The new Hybrids offer a range of lofts to help benefit those players who struggle to hit longer irons. With the low Centre of Gravity and variable face thickness it is easier to launch the ball and achieve precise distance. The Irons have a special feature other than been very forgiving is the Velocity Optimization Channel. This helps increase face flex on impact creating more powerful shots and greater distance even from challenging lies.

Wedges:**Putter:**

Spin it like the pros with the Wilson Staff model ZM wedges. We have low, mid and high bounce options to help build your short game abilities. The Infinite putter has a huge range off models with large putting grips and milled faces that provide the best feel for all levels of golfer.

Please contact Matt on 0272123931 or segagolf01@gmail.com to register your time and fitting type.
